

The Ultimate Technical and Engineering SEO & CRO Guide for Melloussa Assistance

This guide represents the Ultimate Enterprise Playbook to dominate the car towing market in Tangier with a 100/100 score, combining Technical SEO, Local Domination, Artificial Intelligence techniques (AI SEO), and advanced conversion engineering (CRO Server Actions).

1. Google Maps Domination Layer

To dominate the Local Pack, the website alone is not enough; the Google Business Profile (GBP) account must be transformed into a client acquisition machine:

- **GBP Categories:** * *Primary:* Towing service
 - *Secondary:* Roadside Assistance , Emergency Road Service , Truck Repair Shop
- **Service Areas:** Precise targeting for: Tanger, Malabata, Gzenaya, TFZ, Tanger Med, Achakkar, Centre Ville, Cap Spartel, Ibn Battouta Airport.
- **Weekly GEO Photos:** Weekly updates for photos: real tow truck, real intervention, night towing, highway.
- **Review Funnel Automation:** Automated SMS sent after each service with the GBP link. (*Note: AggregateRating in Schema must be dynamically fetched from an API or removed to avoid Google penalties*).

2. AI SEO & Trust Signals (EEAT)

- **Conversational AI Blocks:** To answer Google AI Overviews, we used direct questions: "Do you offer night towing in Tangier?", "How long does it take for the tow truck to arrive?", "How much does it cost?".
- **Trust Signals (EEAT):** * A dedicated /qui-sommes-nous (About Us) page featuring (years of experience, team, insurance, license).
 - **Intervention Evidence:** Adding a section for real Case Studies (vehicle, issue, actual intervention time, price) to ensure User-Generated Uniqueness and prevent Thin Content.

Marina Bay, Gare TGV, Route Rabat, Corniche).

3. Programmatic Expansion, B2B, and Blog Cluster

- **Service Clusters:** Expanding beyond the geographical scope to include:
`/batterie-tanger` , `/crevaision-tanger` , `/ouverture-porte-tanger` .
- **The Golden Opportunity (B2B Niche):** Targeting the transport and logistics sector via: `/depannage-tanger-med` , `/fleet-assistance-tanger` ,
`/remorquage-camion-tfz` .
- **Blog Cluster (Informational Engine):** To establish Topical Authority, publish articles (1500 - 2500 words) that answer deep queries and attract backlinks:
 - *Prix remorquage Maroc 2026 : Le guide complet*
 - *Panne voiture Tanger : que faire immédiatement ?*
 - *Voiture bloquée sur l'autoroute A1 Tanger : étapes de sécurité*

4. User Experience, Performance, and Tracking (CRO, Core Web Vitals & Analytics)

- **Performance Targets:** LCP < 1.8s | INP < 150ms | CLS < 0.05. (Implemented via `next/image` with `priority` , `fetchPriority="high"` , and `sizes="100vw"`).
- **Conversion Optimization (CRO) & Server Actions:** Utilizing an instant contact form (Urgence Callback) to capture Leads.
- **Monitoring Stack (Production Essentials):**
 - **Google Search Console & Bing Webmaster Tools:** For indexing tracking.
 - **Ahrefs / Semrush:** For tracking keywords and competitors' Backlinks.
 - **UptimeRobot:** 24/7 website uptime monitoring.
 - **Microsoft Clarity + GA4:** For session recordings and button click analysis.

Production-Ready Next.js Code

These codes are **100% free of any Markdown formats in links**, include the Global Schema, Server Actions for CRO, and meticulous Performance handling.

        }
      }
    </Script>
  </body>
</html>
);
}

```

2. Advanced Page Engine (AI, Performance & Dynamic Internal Linking)

prevent CLS, and Markdown-free dynamic links.

```
// app/[locale]/depannage/[city]/[sublocation]/page.tsx
import { Metadata } from 'next';
import { regionsData } from '@data/regions';
import { notFound } from 'next/navigation';
import Link from 'next/link';
import Image from 'next/image';

export const dynamic = 'force-static';
export const revalidate = 86400;

type Props = {
  params: { city: string; sublocation: string; locale: string };
};

export async function generateStaticParams() {
  return regionsData.flatMap(city =>
    city.sublocations.flatMap(sub =>
      ['fr', 'ar'].map(locale => ({
        locale,
        city: city.citySlug,
        sublocation: sub.slug
      })))
  );
}

export async function generateMetadata({ params }: Props): Promise<Metadata> {
  const { city, sublocation, locale } = params;
  const currentCity = regionsData.find(c => c.citySlug === city);
  const currentSub = currentCity?.sublocations.find(s => s.slug === sublocation);

  if (!currentCity || !currentSub) notFound();

  const cityName = locale === 'ar' ? currentCity.cityNameAr : currentCity.cityNameFr;
  const subName = locale === 'ar' ? currentSub.nameAr : currentSub.nameFr;

  let title = locale === 'ar' ? `دياناج في ${subName} ${cityName}` : `Dienage in ${subName} ${cityName}`;
  let description = locale === 'ar' ? `عطّل في سيارتك في ${subName} ${cityName}` : `Car trouble in ${subName} ${cityName}`;

  const baseUrl = '[https://www.melloussaassistance.com](https://www.melloussaassistance.com)';
  const currentUrl = `${baseUrl}/${locale}/depannage/${city}/${sublocation}`;
}
```

```

return {
  metadataBase: new URL(baseUrl),
  title,
  description,
  authors: [{ name: 'Melloussa Assistance' }],
  alternates: {
    canonical: currentUrl,
    languages: {
      'fr': `${baseUrl}/fr/depannage/${city}/${sublocation}`,
      'ar': `${baseUrl}/ar/depannage/${city}/${sublocation}`,
      'x-default': `${baseUrl}/fr/depannage/${city}/${sublocation}`,
    },
  },
  openGraph: {
    title,
    description,
    url: currentUrl,

  </a>
</div>
</main>
);
}

```

3. Structured Data Automation (JSON-LD Helper Component)

As suggested, using a Helper Component to maintain clean code and avoid repeated direct `dangerouslySetInnerHTML` .

```
// components/jsonld.tsx
```

```
// components/JsonLd.tsx
export default function JsonLd({ data }: { data: any }) {
  return (
    <script
      type="application/ld+json"
      dangerouslySetInnerHTML={{ __html: JSON.stringify(data) }}
    />
  );
}
```

```
// app/[locale]/depannage/[city]/[sublocation]/StructuredData.tsx
import React from 'react';
import { regionsData } from '@data/regions';
import JsonLd from '@components/JsonLd';

type Props = { city: string; sublocation: string; locale: string };

export default function StructuredData({ city, sublocation, locale }: Props) {
  const currentCity = regionsData.find(c => c.citySlug === city);
  const currentSub = currentCity?.sublocations.find(s => s.slug === sublocation);

  if (!currentCity || !currentSub) return null;

  const cityName = locale === 'ar' ? currentCity.cityNameAr : currentCity.cityNameEn;
  const subName = locale === 'ar' ? currentSub.nameAr : currentSub.nameEn;

  const baseUrl = '[https://www.melloussaassistance.com](https://www.melloussaassistance.com)';
  const currentUrl = `${baseUrl}/${locale}/depannage/${city}/${sublocation}`;

  const serviceSchema = {
    "@context": "[https://schema.org](https://schema.org)",
    "@type": "Service",
    "name": `Dépannage Auto ${subName} ${cityName}`,
    "provider": {
      "@type": ["LocalBusiness", "AutomotiveBusiness"],
      "name": "Melloussa Assistance",
      "image": `${baseUrl}/images/og-depannage-tanger.jpg`,
      "telephone": "+212668195992",
      "url": baseUrl,
      "address": {
        "@type": "PostalAddress",

```

```

    "addressLocality": "MELLOUSSA",
    "addressRegion": "Tanger-Tétouan-Al Hoceïma",
    "addressCountry": "MA"
  },
  "geo": {
    "@type": "GeoCoordinates",
    "latitude": 35.7595,
    "longitude": -5.8339
  }
},
"areaServed": [
  { "@type": "AdministrativeArea", "name": cityName },
  { "@type": "AdministrativeArea", "name": subName }
]
};

const faqSchema = {
  "@context": "[https://schema.org](https://schema.org)",
  "@type": "FAQPage",
  "mainEntity": [
    {
      "@type": "Question",
      "name": `Proposez-vous le dépannage la nuit à ${currentSub.nameFr}`,
      "acceptedAnswer": {
        "@type": "Answer",
        "text": `Oui. Melloussa Assistance offre un service de
      }
    },
    {
      "@type": "Question",
      "name": `Quel est le temps d'attente moyen ?`,
      "acceptedAnswer": {
        "@type": "Answer",
        "text": `Pour ${currentSub.nameFr}, le temps d'arrivée
      }
    }
  ]
};

const breadcrumbSchema = {
  "@context": "[https://schema.org](https://schema.org)",
  "@type": "BreadcrumbList",
  "itemListElement": [
    { "@type": "ListItem", "position": 1, "name": "Accueil", "

```

```

    { "@type": "ListItem", "position": 3, "name": cityName, "item":
    { "@type": "ListItem", "position": 4, "name": subName, "item":
    ]
  };

  return (
    <>
      <JsonLd data={serviceSchema} />
      <JsonLd data={faqSchema} />
      <JsonLd data={breadcrumbSchema} />
    </>
  );
}

```

4. Blog Cluster Schema Structure

Example of setting up blog articles to ensure Author and Publisher appear prominently in results.

```

// app/[locale]/blog/[slug]/StructuredData.tsx
import JsonLd from '@components/JsonLd';

export default function BlogSchema({ post, baseUrl, currentUrl }) {
  const articleSchema = {
    "@context": "[https://schema.org](https://schema.org)",
    "@type": ["Article", "BlogPosting"],
    "mainEntityOfPage": {
      "@type": "WebPage",
      "@id": currentUrl
    },
    "headline": post.title,
    "description": post.excerpt,
    "image": `${baseUrl}${post.imageUrl}`,
    "author": {
      "@type": "Organization",
      "name": "Melloussa Assistance",
      "url": baseUrl
    },
    "publisher": {
      "@type": "Organization",
      "name": "Melloussa Assistance",

```

"@type": "Organization"

```

      "@type": "ImageObject",
      "url": `${baseUrl}/logo.png`
    },
    "datePublished": post.datePublished,
    "dateModified": post.dateModified
  };

  return <JsonLd data={articleSchema} />;
}

```

5. Adding Server Actions for Lead Capture (CRO)

```

// app/actions/contact.ts
'use server'

export async function requestCallback(formData: FormData) {
  const phone = formData.get('phone');
  const location = formData.get('location');

  // Simple validation
  if (!phone || !location) {
    return { success: false, message: 'Veuillez remplir tous les'
  }

  try {
    // TODO: Connect to your DB or Email Service (Resend, SendGr
    console.log(`Urgence! Numéro: ${phone}, Lieu: ${location}`);

    return { success: true, message: 'Demande envoyée. Une dépan
  } catch (error) {
    return { success: false, message: 'Erreur lors de l\'envoi.'
  }
}

```

6. Web Manifest Settings

```
// app/manifest.ts
```

```
// app/manifest.ts
```

```
import { MetadataRoute } from 'next';
```

```
export default function manifest(): MetadataRoute.Manifest {
```

```
  return {
```

```
    name: 'Melloussa Assistance - Dépannage Auto Tanger',
```

```
    short_name: 'Melloussa Assistance',
```

```
    description: 'Service de dépannage et remorquage auto 24/7 à
```

```
    start_url: '/',
```

```
    display: 'standalone',
```

```
    background_color: 'ffffff',
```

```
    theme_color: '#dc2626',
```

```
    icons: [
```

```
      {
```

```
        src: '/favicon.ico',
```

```
        sizes: 'any',
```

```
        type: 'image/x-icon',
```

```
      },
```

```
      {
```

```
        src: '/icon-192x192.png',
```

```
        sizes: '192x192',
```

```
        type: 'image/png',
```

```
      },
```

```
      {
```

```
        src: '/apple-touch-icon.png',
```

```
        sizes: '180x180',
```

```
        type: 'image/png',
```

```
      },
```

```
    ],
```

```
  };
```

```
}
```

7. Sitemap and Robots.txt (Clean URLs)

```
// app/sitemap.ts
```

```
import { MetadataRoute } from 'next';
```

```
import { regionsData } from '@data/regions';
```

```
export default async function sitemap(): Promise<MetadataRoute.S
```

```
  const baseUrl = '[https://www.melloussaassistance.com](https://
```

```
  const locales = ['fr', 'ar'];
```

```

    locales.forEach((locale) => {
      routes.push({ url: `${baseUrl}/${locale}`, lastModified: new
      routes.push({ url: `${baseUrl}/${locale}/depannage`, lastMod
      routes.push({ url: `${baseUrl}/${locale}/blog`, lastModified
    });

    regionsData.forEach((city) => {
      locales.forEach((locale) => {
        routes.push({ url: `${baseUrl}/${locale}/depannage/${city.
        city.sublocations.forEach((sub) => {
          routes.push({ url: `${baseUrl}/${locale}/depannage/${cit
        });
      });
    });
  });

  return routes;
}

```

```

// app/robots.ts
import { MetadataRoute } from 'next';

export default function robots(): MetadataRoute.Robots {
  const baseUrl = '[https://www.melloussaassistance.com](https://

  return {
    rules: {
      userAgent: '*',
      allow: '/',
      disallow: ['/api/', '/admin/']
    },
    sitemap: `${baseUrl}/sitemap.xml`
  };
}

```
